PLASTIC SURGERY

MIA FEMTECH™
VS BREAST
AUGMENTATION

The Mia® technique is a revolutionary advancement in breast harmonization, offering a minimally invasive and highly effective approach to enhancing breast volume and shape. As the first injectable implant, Mia® allows for a quick and comfortable procedure with a rapid recovery time. Through a small incision in the armpit, the unique diamond-shaped implant is inserted above the muscle. This innovative design enables significant volume enhancement, even with smaller implant sizes, providing a natural-looking and harmonious result.

Incision size

Mia Femtech: Uses a small incision in the armpit

Traditional breast augmentation: Typically requires incisions on the submammary fold or around the areola to insert the implants

Recovery time

Mia Femtech: Patients often experience a faster recovery time

Traditional breast augmentation: May require more downtime

Scarring

Mia Femtech: Results in less noticeable scarring in the armpit

Traditional breast augmentation: May require incisions that result in more noticeable scarring

Breast tissue preservation

Mia Femtech preserves breast tissue, which can make the procedure safer and less painful

Breast sensitivity

Mia Femtech preserves breast sensitivity while ensuring a natural feel and look

Breast augmentation might cause a slight decrease in the breast sensitivity

Anesthesia

Mia Femtech is a procedure that can be done under pure local anesthesia with or without minimal sedation. Breast augmentation is on the other hand done under General anesthesia

Reversibility

Mia Femtech is 100% reversible, so the implants can be removed through the armpit. One of the most remarkable aspects of Mia® is the minimal

downtime it requires. Women can return to their normal activities within a few days of the procedure, allowing them to quickly resume their daily routines. Some ladies have even been able to travel or return to work shortly after the procedure, demonstrating the exceptional convenience of this technique.

Mia® is ideal for those seeking a subtle and natural-looking breast enhancement. The results are subtle and harmonious, creating a more natural appearance that is virtually undetectable. By avoiding the need for padded or push-up bras, Mia® allows women to feel confident and comfortable in their bodies. One of the most significant advantages of the Mia® technique is its ability to preserve breast tissue. Unlike traditional breast augmentation methods that involve cutting and manipulating breast tissue, Mia® utilizes a non-invasive approach that avoids damaging the surrounding tissue.

Instead of cutting through the breast tissue, Mia® employs a balloon that is gently inflated to create space for the implant. This technique eliminates the need for tissue dissection, preserving the integrity of the breast tissue, nerves, and blood vessels.

By preserving breast tissue, Mia® offers several benefits. It reduces the risk of complications associated with tissue trauma, minimizes changes to nipple sensation, and facilitates future mammograms for breast cancer screening. This non-invasive approach ensures that the breast remains healthy and functional, even after the procedure. While Mia® technique offers many advantages, it's important to understand that it's not suitable for everyone. Traditional breast augmentation may be more appropriate for women seeking larger implants or significant shape modifications.

Mia® is ideal for women who desire a natural-looking breast enhancement without the need for extensive surgery or prolonged recovery. It's particularly well-suited for those who are hesitant about general anesthesia or prefer a less invasive approach. As a plastic surgeon, I carefully assess each woman's individual needs and goals to determine the most suitable procedure.

Some patients may require more extensive tissue manipulation, such as addressing asymmetry or correcting sagging breasts, which can be achieved more effectively through traditional techniques.

MIA FEMTECH BEFORE & AFTER

A BRIEF NOTE FROM DR. MATTEO VIGO

I decided to become a doctor at early age but I was not aware of the world of Plastic Surgery. Once I have discovered it I fell in love with the whole concept behind and how this field of Medicine can be helpful for many people.

I passionately believe that, in order to improve the physical aspect of a patient, the plastic surgeon needs to combine the principles of art and science, adopting a global approach to understanding the individual desires.

Plastic Surgery is a truly fascinating, dynamic, constantly evolving field of medicine and I believe that the role of a Cosmetic Surgeon is unique and highly privileged.

My main goal is to understand the needs of a patient and try to transform their desires into reality. The role of a plastic surgeon is not only merely surgical but also supportive in the decision process of the best treatment to help patients finding themselves and their wellbeing.

All these steps are taken into consideration once a person walks in my office and the service I am offering them is always at the top. I am combining experience, quality and professionalism to evaluate each single case and offer the best solution for my patients.

“Because you deserve the best” is my motto and I want always to put the patient at the centre of what I am doing.

You have to feel pampered, understood, listened, loved once in my office and the feedback of this feelings from my patient is my best satisfaction.

Dr Matteo Vigo

Often regarded as the Best Plastic Surgeon in Dubai, Dr. Matteo Vigo graduated in Milan in 2004 and started his residency period in the Plastic Surgery and Burn Unit in Verona in 2005.

He worked in the Breast Unit where he developed his skills in breast reconstructive and aesthetic surgery together with the full spectrum of plastic surgery procedure. His Speciality degree was achieved with a work on "Total Breast reconstruction with Fat in patient with breast implants" with the votation fo 70/70 cum laude in 2009.

He started then working in the Aesthetic Surgery field, developing great experience in breast surgery, liposuction and body contouring techniques. He has been the main trainer for all Europe and Middle East for Celution and Pure Graft systems by Cytori, lecturing in different important congresses around the world. He started working in Dubai in 2012 and he has been Chief of Surgery and Chief Medical Officer at American Academy of Cosmetic Surgery Hospital until march 2017.

Since March 2024 he has been one of the few doctors licensed to perform the innovative breast enhancement technique MIA Femtech in the UAE.
