YOUR GUIDE TO
BBY BOTOX

A more sophisticated version of standard Botox injections, Baby Botox selectively uses lesser amounts. By reducing muscle mobility, this method creates a more realistic look. It strikes a creative balance between preservation and improvement. The secret to Baby Botox's effectiveness is accuracy. Dr. Vigo achieves a delicate touch by using small doses of botulinum toxin to target specific face muscles, eliminating fine wrinkles without sacrificing facial expression. A Baby Botox treatment has the following advantages:

Subtlety In Expression

Baby Botox ensures that facial expressions stay authentic and expressive, in contrast to its conventional version. Patients enjoy the elegant, organic result that accentuates their features without looking unnatural.

Gradual, Long-Lasting Results

Baby Botox doesn't guarantee results right away. Rather, it provides incremental enhancements that enable people to easily adjust to the changes. The effects are long-lasting, offering constant brightness for a long time.

The Treatment Process

Personalised Consultation

Dr. Vigo conducts a comprehensive assessment to determine your unique needs and goals before the treatment starts. This individualised approach ensures customised treatment regimens for the best possible outcomes.

Precision In Administration

Dr. Vigo carefully applies small amounts of Botox to specific regions during the treatment. This accuracy prevents the frozen or "overdone" look that is sometimes connected to classic Botox while guaranteeing the intended result.

Minimal Discomfort, Maximum Impact

The application procedure is another example of Dr. Vigo's dedication to patient comfort. Most patients report relatively minor feelings throughout the operation, indicating that baby Botox causes very little discomfort. It is a desirable choice for people with hectic schedules because of this and its short recuperation periods.

Post-Treatment Care

Dr. Vigo's post-treatment care places an emphasis on the body's inherent healing mechanisms. He gives patients thorough aftercare instructions so they may properly take care of their skin and preserve the effects. We advise recurring follow-up sessions to guarantee long-lasting results. During these visits, Dr. Vigo can evaluate how the outcomes have changed and make minor modifications to better suit each patient's response.

How Long Does Baby Botox Last?

The benefits are long-lasting and mild, usually lasting three to four months. Depending on a person's lifestyle, skin type, and how their body processes the botulinum toxin, the results' durability can differ from person to person.

Does Baby Botox Prevent Wrinkles?

It can, in fact, aid in halting the development of new wrinkles. Smaller dosages are intended to decrease muscle activity in specific regions, delaying the development of fine lines and new wrinkles and preserving a more youthful, glowing appearance.

How Is Baby Botox Different?

By employing smaller dosages and emphasising a more natural-looking outcome, Baby Botox sets itself apart from conventional Botox treatments. This method guarantees that facial expressions stay natural and fluid, eliminating the “frozen” appearance that is occasionally connected to traditional Botox procedures. For anyone looking for delicate renewal and refinement, it’s the ideal option.

How Often Do You Need Baby Botox?

Depending on personal aesthetic preferences and the body’s reaction to the botulinum toxin, the frequency of treatments varies. In order to keep their ideal appearance, patients typically decide to undergo follow-up procedures every three to four months. Dr. Vigo will give you personalised guidance on the best course of therapy for your particular need during your consultation.

Combining Baby Botox with Other Treatments

For a more thorough approach to facial rejuvenation, Dr. Vigo frequently mixes Baby Botox with additional procedures. In order to prevent excessive movement and produce the appearance of smoother skin, baby Botox targets the fine, dynamic face muscles. For example, Baby Botox works well with dermal fillers to treat volume loss and dynamic wrinkles. This combo can give the face a faint yet noticeable “lift.”

In addition to your Baby Botox treatment, Dr. Vigo provides anti-wrinkle injections. These could involve procedures for regions like the neck or lower face that Botox doesn’t usually target.

A BRIEF NOTE FROM
DR MATTEO VIGO

I decided to become a doctor at an early age but I was not aware of the world of Plastic Surgery. Once I have discovered it I fell in love with the whole concept behind and how this field of Medicine can be helpful for many people.

I passionately believe that, in order to improve the physical aspect of a patient, the plastic surgeon needs to combine the principles of art and science, adopting a global approach to understanding the individual desires.

Plastic Surgery is a truly fascinating, dynamic, constantly evolving field of medicine and I believe that the role of a Cosmetic Surgeon is unique and highly privileged.

My main goal is to understand the needs of a patient and try to transform their desires into reality. The role of a plastic surgeon is not only merely surgical but also supportive in the decision process of the best treatment to help patients finding themselves and their wellbeing.

All these steps are taken into consideration once a person walks in my office and the service I am offering them is always at the top.

I am combining experience, quality and professionalism to evaluate each single case and offer the best solution for my patients.

“Because you deserve the best” is my motto and I want always to put the patient at the centre of what I am doing.

You have to feel pampered, understood, listened, loved once in my office and the feedback of these feelings from my patient is my best satisfaction.
